## 3DTG Exquisite Corpse One

Posted on [March 23, 2010](#) | [1 Comment](#)

It's complete! Here's my first attempt at organizing an Exquisite Corpse collaborative art project. You can learn more about the technique [here](#). Big ups to all the contributing artists: Todd Myers, [Alex Berry](#), [Shauna Jin](#) and [Aaron Heinen](#). I hope to see a few remixes floating around soon. Click the thumbnail below to view a hi-res version.

## City 2.0

Posted on [February 2, 2010](#) | [2 Comments](#)

I stumbled across this thesis film City 2.0 by INSOC on [Digital Urban](#) the other day. Me thinks the Radiohead works very well with the style.

## The Third & The Seventh, a CG Short Film

Posted on [January 16, 2010](#) | [1 Comment](#)

Render by [Alex Roman](#)

Recently, a friend told me about an amazing 12 minute CG short film called *The Third & The Seventh* by Alex Roman. His concept presents architecture as art through a photographic point of view. The artist had a heavy hand in developing every piece of this film. The concept, direction, production, lighting, music, texturing and modeling were all done by him. Big ups! I love that he hacked a few open source models from the [Google 3D Warehouse](#), used his creativity and software mastery and was able to create beautiful CG art. Enjoy.

## Colorado State Capitol Rotunda

Posted on [December 19, 2009](#) | [Leave a comment](#)

Here are a few comparisons between my reference photographs and my final renders of the first floor rotunda in the Colorado State Capitol. I modeled, lit, textured and animated a walk through video (coming soon!) of this scene for my first project using Autodesk Maya software.

## Exquisite Corpse Art Project

Posted on [November 21, 2009](#) | [13 Comments](#)

Please join my first collaborative art project. We will use a technique known as Exquisite Corpse. Its a Surrealist technique where an initial artist finishes a piece of art and passes a small portion of it to the next artist. That artist then uses the features (lines, colors, etc...) of the prior piece as a template but then fill their canvas with their own vision. Repeat steps one and two, rinse, dry and Boom! there goes the dynamite, you have collaborative art. Find out more about this method here [http://en.wikipedia.org/wiki/Exquisite\\_corpse](http://en.wikipedia.org/wiki/Exquisite_corpse).

This is a 2D project to allow the greatest participation. If you can paint a stick figure using MS Paint or a sketch pad then you're all set. If you can't, then you're still welcome to join. All skill levels are welcome and encouraged. Here are the details.

- Email me if you would like to participate at [myersdoubled@yahoo.com](mailto:myersdoubled@yahoo.com)
- Canvas dimensions are 1526 w x 2048 h pixels 300 dpi (that's a 3 x 4 ratio).
- I encourage you to work and submit digitally but you may use any medium that is available to you. Remember, you'll need to submit your piece to me so I can process and get the next artist going.

Look at an amazing example of what can happen when three creative professionals collaborate this way.

<http://www.jabcstudio.com/pages/corpse.php> Frankly, I can't wait to see what is created when an array of skill levels come together. When its finished you will be proud to have your name attached to such an amazing piece of art. And then we can print it on t-shirts, coffee mugs and bumper stickers and become rock stars!

I hope you will give it a try,

Todd
